Date: Thursday, August 20, 2015 2:24:13 PM](#)

Hello,

We are working to establish dates for the 2016 PDP Annual Federal/State Meeting. We plan to hold the meeting in Sacramento, CA and invite PDP Administrative Managers, Sampling Managers, Technical Program Managers and Quality Assurance Officers to attend.

Please let me know which of the following dates do not work for you:

- April 5-7 (travel dates would be Mon/Fri, the 4th and 8th)
- April 19-21 (travel dates would be Mon/Fri, the 18th and 22nd)
- April 26-28 (travel dates would be Mon/Fri, the 25th and 29th)

Thanks,
Diana

Hi David,

I added a few comments/clarifications. I added some additional commodity choices as we need replacements for cherries, nectarines, and another commodity for October. Eggs we can likely do, no problem, at NSL in Gastonia (Roger Simonds' lab), with the expected funding. Eggs would replace peanut butter.

Thank you,
Diana

Subject: Critical Compounds
Date: Wednesday, April 08, 2015 8:25:27 AM

Hi David,

I am putting together slides for the PDP Federal/State meeting. We are adding cucumbers and lettuce in July to replace peaches and watermelon – we will have two years' data for each. Are these correct for critical compounds for the labs to cover in cucumbers and lettuce – I pulled from the information you gave me last year prior to the meeting?

- Cucumbers
 - DDVP (Dichlorvos)
- Lettuce
 - DDVP (Dichlorvos)
 - Dimethoate
 - Omethoate

Commodities beyond July are totally up for discussion, including extension of green beans for acephate/methamidophos.

We two commodity slots to fill in October, one in January 2016 and one more in March 2016. Also, we plan (potentially and depending on funding) to revisit eggs in FY16.

Thanks,
Diana

Subject: EPA/PDP Details
Date: Friday, October 09, 2015 7:53:45 AM

Hi David,

Below are brief bios for Sitra Abubeker and David Nadrchal, PDP Chemists, who will be joining you for a detail October 26th. Both are actively involved in PDP planning and SOP revisions/development. Sitra works with the Florida and Michigan laboratories and David with Texas and NSL. Thank you for facilitating and hosting!

Sitra Abubeker obtained a BS from Georgia State University and an MS in Chemistry at Clark Atlanta University in Atlanta, GA. Since 2014 she has been with the USDA Pesticide Data Program as a Chemist Liaison to the Florida State Department of Agriculture and Michigan State Department of Agriculture Laboratories. Prior to joining PDP she held a research chemist position with USDA's Agricultural Research Service in the Invasive Insect Behavior and Biocontrol Laboratory. She worked extensively on pheromone collection and identification of invasive insects such as the brown marmorated stink bug using GC-MS and GC/MS/MS instrumentation.

David graduated with his bachelors from Iowa State University in 2007 and his masters from George Mason University in 2013 both in Chemistry. Prior to PDP David worked in a variety of lab environments including water quality testing, research and development, chemical production, pesticide extraction from rendering products, medical testing, and indoor air quality. His research and previous work included GC/MS sample extraction and method development.

Thank you and best regards,
Diana

Subject: Foreign Use Pesticides
Date: Friday, January 30, 2015 10:04:59 AM

Hi David,

As you know, since 2012, we've been trying to put "foreign use" pesticides into PDP – mostly in response to the OIG audit that recommended EPA, FDA and USDA work to do this.

Primarily, we've been using FDA intel of late to determine what to add – based on what FDA is seeing in imports. These may or may not have a U.S. tolerance.

If they are not registered in the U.S. and aren't going to be, what will EPA do with that data?

I am working with Sitra, one of our new chemists, to put together an update for the April meeting. She asked me this question and I was not entirely sure. I know how the data WITH registrations will be used. Will the no tolerance data be put into an associated cumulative risk cup? Other?

Thanks,
Diana

Shanker,

Yes, they are presenting a computed Chronic Reference Concentration (CRfC) and several other values that use some other dietary intake data. But the list of commodities presented and the sample counts (along with the help screens) indicate that PDP data are the only source for the residue findings.

Hello,

I found a great website this weekend that compiles PDP data from 1991 to present into a single system that is searchable by select data parameters (commodity, sample origin (domestic, combined import, or select import country), organic status, year, pesticide). This is a beta test site put together by Washington State University (WSU) for the Measure to Manage Program (M2M), with it being a beta there are some issues with the system (i.e. dealing with reporting changes throughout PDP history, total vs. individual isomer data, figures not matching table data, etc...), but I found it very fascinating and a great application of PDP data. Can't wait to see how this site evolves!

[Link to M2M home page](#)

[Link to Pesticide Dietary Risk Analytical System](#) Look at the **Analytical Tools** section for the interactive, beta sites for "Residues and Relative Risks by Food", "Residues and Relative Risks by Pesticide", "Residues and Relative Risks in Domestically Grown Versus Imported Food", and "Residues and Relative Risks in Organic and Conventional Food"

Sincerely,

Brittany J Holmes

Subject: RE: History of Meat Monitoring by PDP.pptx

Diana,

That's right, chicken is a top 24 food.

I really appreciate it. I hope you have a nice weekend too.

I presented the commodities to the DE SAC. They thought grapefruit because of couple of chemicals. They wondered aloud about Ethephon and blackberries. I thought I remembered there was a method issue with that chemical.

David Miller should be back from his 3 ½ week vacation next week so he will weigh in as well on which commodity to recommend.

David

Here is something I sent to our Public Affairs.

From: Haynes, Diana - AMS
Sent: Monday, January 05, 2015 12:24 PM
To: Eckhouse, Sara - AMS
Cc: Brownlee, Jim - AMS; Keeler, Douglas - AMS; Wood, Peter - AMS
Subject: RE: PDP Annual Summary and Glyphosate in the news

Hello Sara,

To answer questions regarding testing glyphosate testing by PDP and its cost:

- Soybeans are the only commodity ever tested by PDP for glyphosate. This was done in 2011. Testing soybean samples for glyphosate and its AMPA metabolite using a selective analytical method (SAM) in 2011 cost about \$750 per soybean sample. In comparison, testing soybeans for any pesticide using multiresidue methods cost less than \$10 per sample (per pesticide).
- Each year, USDA and EPA work together to identify foods to be tested on a rotating basis. When it was determined by the two agencies that soybeans should be tested in 2011, USDA suggested that glyphosate also be tested, in addition to the multiresidue pesticides, given its wide usage. EPA agreed as PDP did have the funds available to support this work. In subsequent years and commodities (as well as previous), glyphosate was NOT identified by EPA as a high priority pesticide based on the commodities tested – EPA risk assessments did not show that additional data was needed for the selected commodities – as well as the high cost of the analyses.

Please let me know if you need further information.

Thank you,
Diana

Subject: FW: PDP New Commodity 11/15
Date: Thursday, November 12, 2015 7:09:08 AM

Hi David,

I hate to bug you and I know we have meetings scheduled for Monday and of course Tues/Wed of next week, but we have to release the PDP Program Plan for January tomorrow. We need one replacement commodity for nectarines in California. It looks like our top two contenders are milk and then sweet potatoes. Do you think you can let me know by tomorrow morning?

Thanks,
Diana

Subject: RE: PDP New Commodity 11/15

Hi David,

So a two year budget was signed – hooray! It looks like we will be able to add eggs in the spring as we had hoped. For the new January commodity (from the list below), what do you think of adding milk? I

think it is a very important commodity, last tested in 2011, and CA can analyze milk without a problem. Of course, if you think the other commodities, or one not listed here are more important, that is your call.

Thanks,
Diana

Subject: PDP New Commodity 11/15

Hi David,

FYI, I will be out of the office for two weeks for training (until the end of October) and Chris will be Acting Director in my absence. I'll be checking email periodically, but please keep Chris in the loop on anything requiring PDP's attention.

We need to announce one replacement commodity for nectarines (to begin January 2016) on *November 15th*. So, ignoring the white elephant in the room, here are some potential replacements – the commodity will go to the California lab:

Milk – last tested in 2011

Sweet potatoes – last tested in 2010

Mangoes – last tested in 2010

Hot peppers – last tested in 2011

Cabbage – last tested in 2011

Onions – last tested in 2012

Canned pineapple? Fresh done over 10 years ago.

We need to add eggs but will need additional funding to do so in NSL.
Same for grains – we need corn and wheat data but would need additional funds to partner with GIPSA.

Thanks,
Diana

Hi Diana,

I'll need to get travel approval started. If you could just email a rough agenda – purpose for meeting or something I can use for justification, it will help get the approval process going. Formal memo is unnecessary.

...also, if you could suggest a hotel that might be affordable and/or the address of the meeting offices, I'll be able to estimate the hotel and flight costs.

I'll charge to PDP so Ray will submit a travel request also.

Hi David and Roger,

Chris and I have been talking about peanut butter – you can see the emails below. Historically, we have only allowed “smooth” type peanut butter – no chunky. Do we need to reconsider, perhaps for the second part of the survey? The history of this decision is outlined below.

Thanks,  
Diana

**To:** Pappas, Chris - AMS  
**Subject:** Peanut Butter

Hi Chris,

I did a little digging out of curiosity. Looks like Phil Travers and then Kenny Payne were the Sampling Managers back then (1999/2000). Apparently, based on initial research, we (PDP) were going to allow smooth and chunky types of peanut butter. Smooth then had a 60% market share and chunky 40%. Then a decision was made to exclude chunky along with old-fashioned, etc. types. I seem to remember that

we were worried about all the oil on top of the “natural” – getting it to mix in (homogeneity as you mention below), plus analytical difficulties. And then, there was concern that chunky would be mistaken for natural.... I think this is how it went.

Anyway, are we missing too much by excluding chunky? Sorry to mention it this late, but better now than later.....

For consideration. A question for EPA?

Just trying to exercise due diligence.

Thanks,  
Diana

I think I'll pass on that one and try to make the next one.

I have AOAC and then BERM and this chapter and then PDP wants me to meet with EPA on sampling in October and I want to meet with Bayer in Carolina on their sampling and plan for a session on sampling at EPRW.

...but I must move the drat chapter forward and at least get a draft to folks so they can help me correct everything. Richard Fussell and Leah Riter said they would contribute and I know that Arpad will want to also, so it will be better to pull a draft together then let them give me input than to just keep delaying.

I find this extremely difficult! Not my thing

Subject: GOODSamples

I can't wait to get the next iteration of GOODSample out to you. It seems to be getting better and better. Maybe by the end of this week. Pitard was generally very complimentary but a couple of his comments led Chuck and I do change the approach in a couple of suggestions. I think you will like it.

---

Hi David,

So I'm preparing in case we (PDP) are asked by the Dept to test for glyphosate. We don't have any grains in the program right now. I assume the "best" data would be for soybeans, wheat, alfalfa, etc. But we would have to set up with GIPSA to sample, etc. Would any other data, such as on fruits and vegetables that are currently in the program, be of value? Apples, pears, peaches, green beans, etc.

Thanks,  
Diana

**Subject:** New PDP Commodities  
**Date:** Friday, January 02, 2015 2:54:52 PM

---

Hi David,

We will have a couple of commodities to replace in July and PDP labs will want to know what we've chosen before the April meeting. Any ideas here? I know you mentioned tea and some other things that might be more long-term, as in October or later.

Some things that come to mind that are probably short term must dos or should dos: lettuce (last tested in 2011) and cucumbers (last tested in 2010). Also sweet potatoes were last tested in 2010 as was asparagus. We are planning to add peanut butter April 1. Maybe we can talk in the next couple of weeks.

Thanks,  
Diana

**Subject:** New PDP Commodity  
**Date:** Wednesday, June 24, 2015 8:40:56 AM

---

Hi David,

We need a replacement commodity for sweet corn in October 2015. At the April 2015 meeting, I mentioned sweet potatoes (last tested in September 2010) as a top contender, as a rotational (not brand new) commodity. Below are other possibilities. Thoughts?

Thanks,  
Diana

| Commodity          | Last Tested    | Top 24 Children's Food |
|--------------------|----------------|------------------------|
| Asparagus          | June 2010      | No                     |
| Cabbage            | December 2011  | No                     |
| Grapefruit         | December 2006  | No                     |
| Hot Peppers        | September 2011 | No                     |
| Mangoes            | September 2010 | No                     |
| Onions             | September 2012 | Yes                    |
| Pineapple (canned) | June 2002      | Yes                    |

**From:** [Haynes, Diana - AMS](#)  
**To:** [Hrdy, David](#)  
**Subject:** PDP Funding  
**Date:** Wednesday, January 21, 2015 10:23:53 AM

---

Hi David,

I am writing up requests for additional funding – some of these items are “wish list”, almost “pie in the sky” ideas, but I want to run them by you.

First, I will, as always, ask for funds for equipment and then some needed funds for IT – Roger wants to put together an app to query data across years – wouldn't this be great to be able to query multiple years!

The last two, I need your input on. The first is to add shrimp, with testing to be done at Roger Simonds' lab. My justification is that data is needed – “Program stakeholders need pesticide residue data for shrimp and the pesticide residue data available for shrimp is scarce.” Is this true? Can I say this?

The second is to look at 300 samples of washed apples vs. 300 samples of unwashed apples. Samplers would collect 300 apple samples (five lb. each) and send them to the Washington lab. The lab would randomly divide the sample in half, wash half and homogenize that half, and then homogenize the other half unwashed. The samples would then be tested for the same profile that WA is currently testing apples for (apples re-entered the program in October 2014).

Here is my justification for this last one:

REQUEST DESCRIPTION: AMS is requesting additional funds to PDP to conduct a special study of washed vs. unwashed produce. PDP currently washes all produce items before testing, in order to emulate consumer practices and make the data more usable by stakeholders. This study will provide real-life data on pesticide residue levels before and after washing produce.

JUSTIFICATION FOR REQUEST/BENEFIT TO STAKEHOLDERS: This increase supports USDA's efforts to ensure America's children have access to safe, nutritious, and balanced meals by enabling the Pesticide Data Program (PDP) to generate pesticide residue data that is used to assess dietary risk for children and the general population. The requested funding level will allow the program to conduct a wash vs. unwashed study of a selected product item (apples). PDP will perform a side-by-side comparison of 300 unwashed apples vs. 300 washed apples and will then provide the data to the U.S. Environmental Protection Agency (EPA) and to the public, per usual procedures (i.e., will publish the data to the website). EPA will use the data to verify the models currently used.

IMPACT IF NOT FUNDED: If funded, stakeholders will have data available gauge the effect of washing produce items on pesticide residue levels. This data is needed by EPA, a primary PDP stakeholder, and will demonstrate with real-life data how washing produce can decrease pesticide residues. This data also will support the advice that is often provided to consumers – continue to eat fruits and vegetables, but do wash them first.

**Subject:** PDP New Commodity  
**Date:** Friday, October 16, 2015 7:59:20 AM

---

Hi David,

FYI, I will be out of the office for two weeks for training (until the end of October) and Chris will be Acting Director in my absence. I'll be checking email periodically, but please keep Chris in the loop on anything requiring PDP's attention.

We need to announce one replacement commodity for nectarines (to begin January 2016) on *November 15<sup>th</sup>*. So, ignoring the white elephant in the room, here are some potential replacements – the commodity will go to the California lab:

Milk – last tested in 2011

Sweet potatoes – last tested in 2010

Mangoes – last tested in 2010

Hot peppers – last tested in 2011

Cabbage – last tested in 2011

Onions – last tested in 2012

Canned pineapple? Fresh done over 10 years ago.

We need to add eggs but will need additional funding to do so in NSL. Same for grains – we need corn and wheat data but would need additional funds to partner with GIPSA.

Thanks,  
Diana

**Date:** Thursday, October 15, 2015 8:47:09 AM

---

Good Morning,

We have set a date for the PDP Sampling Frame Meeting that we discussed in Albany, NY in April.

The meeting will be held November 17-18, 2015 at the EPA HED offices in Crystal City, VA. Thank you, David, for reserving the rooms!

To start building an agenda, Chris and I have come up with the following topics – please review and let me know of any additions/changes/comments/etc.:

- Sampling Theory (resource papers as listed below)
- Current PDP Sampling Frame and Sample Numbers per Month per Commodity

Adjustment of total number of samples – reduce sample overage (allow for extra commodity?)

- Current U.S. Census Figures

Reallocation of sample numbers among States

- GAO Comments

Define each States' universal site list (via Blue Book)

Compare to PDP's site list to identify gaps and areas for potential improvement.

Increase number of sampling sites

We plan to have the meeting from 8:30 a.m. until 4:00 p.m. the first day and conclude the second day a little early (~2:00 p.m.) to allow for an evening flight out. Please let me know if this works for your schedule – if not, we can adjust.

Prior to the meeting, we plan to send out the following materials to the group as background (let me know if additional resources you think would be helpful):

JOAOC Articles:

- Sampling and Sample Processing in Pesticide Residue Analysis
- Distributional Assumptions in Food and Feed Commodities— Development of Fit-For-Purpose Sampling Protocols
- QC of Sampling Processes—A First Overview: From Field to Test Portion
- Materials Properties: Heterogeneity and Appropriate Sampling Modes
- Considerations for Inference to Decision Units
- Theory of Sampling: Four Critical Success Factors Before Analysis
- Sample Quality Criteria

FDA's recently released GOODSamples document.

Thank you and best regards,  
Diana

Hi David,

We are working to put on a webinar about PDP in January. The target audience is all stakeholders (so of course, you will be on the invitee list) as well as some new potential stakeholders (more vendors, growers, etc). One of the topics we want to cover is how PDP benefits agriculture. I wanted to focus on somehow describing/counting recent re-registrations due to PDP. We have the bifenthrin Section 18 that we can talk about explicitly. Do you have any good ideas from your perspective about how to communicate which/what uses PDP has helped along? Any input appreciated!

Thanks,  
Diana

**Subject:** RE: acephate green bean tolerance  
**Date:** Friday, March 20, 2015 9:41:16 AM

---

Hi David,

This is a very good time to discuss planning. Right now, we have fresh green beans being tested through September 2015. If needed, we can extend that – fresh green beans started in July 2013 and we extended through September 2015, and can certainly extend longer if needed. Please let me know – we can bring this up at next month's PDP Federal/State Meeting.

Please let me know if you need the 2014 green bean data for acephate and methamidophos with origin data included. We can get that to you very quickly (Roger can).

Thanks,  
Diana

---

**From:** Miller, David [mailto:Miller.DavidJ@epa.gov]  
**Sent:** Friday, March 20, 2015 9:10 AM  
**To:** Councell, Terry; Haynes, Diana - AMS  
**Cc:** Hrdy, David; Crowley, Matthew  
**Subject:** acephate green bean tolerance

Please don't share the email chain, but it is fine to let others in FDA (and PDP) know in general that EPA will be starting to revoke the tolerance for acephate on green beans if that will affect FDA plans for sampling green beans in the future.

Recall, we cancelled the use in 2012 (March, I think), but had an existing stocks provision. PDP sampled green beans in 2013 and found a sizable fraction had acephate residues. A quick peek by us at the unreconciled 2014 data through September that PDP provided to us suggested that 2014 was about the same- no reduction in concentrations or percent detects compared to 2013 which – in itself -- did not appear reduced from the last time PDP sampled green beans (2008 if I remember correctly).

The risk managers might come to us asking about a date to revoke the acephate tolerance. If they do, I might suggest 31 December 2015 if we can get an FR announcement out soon enough. So the farmers will be able to use any existing stocks of acephate up through this crop year, but next year (crop year 2016), any detected residues of acephate or its methamidiphos metabolite will be illegal. It's possible that somebody will decide that December 2015 is too soon and doesn't leave enough time for farmers to adjust or foreign countries to comment and object, I don't know. But given that we cancelled the use here for cause back in March of 2012 and we are three years past that date now, I think we can probably justify a "sooner rather than later" date.

Anyway, it might be good for EPA, PDP, and FDA to coordinate on this with respect to sampling, now that the CU article has highlighted the issue (unfortunate that it sometimes takes that). Diane – could you let me know what the future PDP plans are for sampling green beans. I think it would be good if –once we get rid of the tolerance – for PDP to include or add back in green beans and close this issue out once and for all. Also – Diana- it is possible that the risk managers will want to get an idea of what and where we are seeing acephate on green beans – domestic, foreign, at what levels etc. for 2014. Not for use in a risk assessment or for release, but just to better plan on what should be done and where the problems might be. So, we might be asking for an unofficial not-to-be-released peek at the full set of 2014 acephate + methamidiphos on green bean data for this if that is ok with you. So this is just a heads up to you on that.

Overall, I think this is good news.

David

David 's idea for moving on the tolerance for green beans seems like a good one.

Rick, please think about what OPP should do.

Thanks

Bill

**Subject:** RE: CU verbiage for Bill J.

One thing to note – while we did indeed cancel uses of acephate on green beans in 2012 (with existing stocks provision) , we have not yet either revoked the tolerance or even put out a FR notice that announces that we will be revoking the tolerance or lists a date. So if somebody looks up a tolerance for acephate on green beans, it will be there with no indication that we’ve done anything or it will be going away.

Since green beans are the only domestic commodity listed as very high risk by CU, I think it would be a good idea for that FR notice announcing a future date at which the tolerance will disappear would be useful for OPP to get out as soon as we can.

David.

While the Consumer Reports dietary risk index (DRI) methods are scientifically sound for ranking of pesticide residues measured in fruits and vegetables, EPA believes that they should not be considered to necessarily be accurate indicators of risk. EPA stringently regulates pesticide residues as per the FQPA standard of “reasonable certainty of no harm” and requires extensive testing of pesticides before they can be legally registered and sold. The Consumer Reports methods characterizes DRI’s of 1 or more in the “Very High” risk category and those of 0.2 to 1 as in the “High” risk category. Given FQPA’s stringent standards for pesticide approval, it is important to note that Consumer Report’s DRIs in the “High” Category are at least 100 to as much as 5,000 times below where EPA would anticipate potential adverse health effects based on extensive required testing. This means that Consumer Reports produce rankings from “very low” to “high” (i.e., less than 0.01 to 1.0) are considered safe by EPA under FQPA standards and fully meet our standard of reasonable certainty of no harm. For those foods in the “Very High” category (green beans, sweet bell peppers and hot peppers) , EPA has already taken action on domestic green beans eliminating all uses of acephate /methamidiphos on this commodity; this has not yet been reflected in the USDA PDP data used by Consumers Union. [WE ARE STILL WORKING MEXICAN HOT AND SWEET BELL PEPPERS )

Hi David,

Some examples:

- Carbendazim in most everything – summer squash, carrots, peaches, raspberries, apple juice...
- TBZ in nectarines
- Chlorpyrifos in carrots
- Chlorpropham in peaches
- AZM in nectarines

Those are three that stick out in Sitra's analysis so far.

Thanks😊

Hi Diana,

In theory, we should be putting these residues into the risk assessment as PDP reports them. However, that said, I have seen where we have explicitly omitted this data. The answer then is, *it depends*.

We need the data to show what the risks actually are so the data are important but decisions may not be used with them all the time.

We can't do much except for when it is a risk or when it is a trade irritant.

We will use the data in the end some how or another. What are some examples, that might help me answer this question too.

**Subject:** Foreign Use Pesticides

Hi David,

As you know, since 2012, we've been trying to put "foreign use" pesticides into PDP – mostly in response to the OIG audit that recommended EPA, FDA and USDA work to do this.

Primarily, we've been using FDA intel of late to determine what to add – based on what FDA is seeing in imports. These may or may not have a U.S. tolerance.

If they are not registered in the U.S. and aren't going to be, what will EPA do with that data?

I am working with Sitra, one of our new chemists, to put together an update for the April meeting. She asked me this question and I was not entirely sure. I know how the data WITH registrations will be used. Will the no tolerance data be put into an associated cumulative risk cup? Other?

Thanks,  
Diana

Subject: Global MRL Database EPA Presentation Agenda & Handout

Dear Doug and David H.,

Attached is a handout I put together for the webinar presentation. If you could print copies for everyone that would be great. Here is an agenda of items I would like to cover:

- Review handout
 - Differences between subscription types
 - What is happening August 26th?
 - US tolerances & AIs not included in the Global MRL Database
- Switching between your subscription types
- A quick aside to vet drugs
- Search page features
 - Select commodities by Codex, EU, & US crop group definitions

- Create your own crop groups
- Load Saved Query
- Perspective market
- Report results
 - Regulation details pane and the “More INFO” button
 - The importance of the alert icons—there are five of them
 - Quick Links
 - Changing the market perspective
- General & advanced report filters
 - The many different types of MRLs
- Excel downloads
 - Simple flat & the MRL chart
 - Row limits
- Change report & email notifications

Everyone should feel free to ask questions as we go along. I have a generic query I use, but if anyone has specific searches they want to look at we can do that too.

Best regards,
Kim

**Subject:** Glyphosate - More

Hi David,

So I'm preparing in case we (PDP) are asked by the Dept to test for glyphosate. We don't have any grains in the program right now. I

assume the “best” data would be for soybeans, wheat, alfalfa, etc. But we would have to set up with GIPSA to sample, etc. Would any other data, such as on fruits and vegetables that are currently in the program, be of value? Apples, pears, peaches, green beans, etc.

Thanks,  
Diana

I can't wait to get the next iteration of GOODSample out to you. It seems to be getting better and better. Maybe by the end of this week. Pitard was generally very complimentary but a couple of his comments led Chuck and I to change the approach in a couple of suggestions. I think you will like it.

If you want to do all 4 days.....

I think it may not be worth your valuable time. Let me know and I can respond to Jo Marie if you want...

We should maybe focus instead on setting up a meeting between us, NASS, FDA, Jo Marie, etc... Like we discussed earlier.

Thanks,  
Diana

Diana,

That's right, chicken is a top 24 food.

I really appreciate it. I hope you have a nice weekend too.

I presented the commodities to the DE SAC. They thought grapefruit because of couple of chemicals. They wondered aloud about Ethephon and blackberries. I thought I remembered there was a method issue with that chemical.

David Miller should be back from his 3 ½ week vacation next week so he will weigh in as well on which commodity to recommend.

Hi Bo,

Thank you for that information. I don't need the labels, but thank you for the offer.

We found imiprothrin on avocados. Probably from imiprothrin used in the warehouse. Our program (PDP) will consider these as violations.

Thank you for your time and help!

Best regards,
Diana

Hi Diana –

I hope all is well. There 21 products currently registered that contain imiprothrin as an active ingredient, however they are all labeled for non-food uses. I can send you the EPA registration numbers if you would like to review the labels on PPLS. Let me know if you have any other specific questions.

Enjoy your day.

Subject: Nomination for 2015 ISES award/Actions at end of e-mail

Dear all, I would like to nominate David Miller for the Constance L. Mehlman Award from ISES and would appreciate your help and input:

Purpose of Award:

To recognize an ISES member who has made an outstanding contribution in exposure analysis research that helped shape a national or state policy or provided new approaches for reduction or prevention of exposures.

The following link describes the award and requirements in further detail:

http://www.isesweb.org/About/about_awards_cm2.htm

Here is what is required:

Nominating Procedure:

Nominations shall consist of a nominating letter from a current ISES member describing the nature of the exposure analysis research and how it helped shape a national or state policy or provided new approaches for reduction or prevention of exposures. A copy of the nominee's curriculum vitae should also be submitted. A supporting letter from at least one other person familiar with the contributions of the nominee is necessary; other supporting letters are strongly encouraged.

I would be willing to draft a nomination letter. I can think of several instances from my perspective alone where David helped shape policy around FQPA and exposure and risk assessment for pesticides and that resulted in reductions or prevention of exposure (or from our perspective the maintenance of needed grower tools by showing exposures are below concern). I may not have always agreed with all of his conclusions, but I believe he truly depended on and made realistic science based decisions. I also have never seen a more dedicated employee in any part of our world!

I would like input or examples from any of you or anyone else you can think of who can contribute.

Apparently, the more supporting letters received the better. David has been involved with USDA, NIOSH, EFSA, PMRA and probably many other government organizations, NGOs, industry and academics than I am aware of. The more groups and countries represented in the letters would demonstrate the breadth of this influence

Actions:

David H., Matt or Julie:

Do you know of any EPA policies that would prevent him being nominated (or nominated by industry person)?

Do you guys have CVs maintained at EPA or do you know if David has one?

All:

What are your thoughts on telling David he has been nominated? (In other words should it be a

surprise if he wins?)

What examples come to your mind in regards to David in context of the award?

Who else can we contact for letters of support?

Finally, are you willing to provide a letter of support?

Once I start receiving feedback from this e-mail I will contact you with results and next steps. I believe we have until end April to get everything in.

Thank you, Jennifer

Hi David,

Chris and I discussed this and have the following inputs:

1. The Federal a Records Center is used to store the records for PDP for 25 years per CFR requirements.
2. That said, we have never had to retrieve any PDP data packages from the Center.

Finally, not sure how useful it would be to look at raw data from 7-10+ years ago.

On another issue, how does the week of November 16 look for you for a Sampling Frame meeting with NASS? Jo Marie is available that week, but we would still need to check with NASS.

Thanks,
Diana

**Subject:** OP Market Basket Data

David, the companies involved in the OP Market Basket Survey are being asked if they want to continue storing the raw data from the late 90's survey and analysis (chromatograms, notebooks etc.). The original contracts were to store it for 10 years and then destroy. It is now 15 years. The task force members would need to pay for the additional storage and for future if we think we need to keep them.

I do not think there would be any reason to go back to the raw data at this point? I do not think the data would be useful in current assessments either as it is so old.

Do you know if there is any policy on this or give us your thoughts or forward to the appropriate person at HED?

Thanks, Jennifer

Hi David,

Environmental contaminants are now in a separate appendix (for a couple/few years now). For 2013, please see Appendix H. We felt it was skewing the data, especially when high fat commodities were in the program, so we moved that data to a separate appendix (Roger, do you have anything to add?).

Thanks,  
Diana

Hi David,

I hate to bug you and I know we have meetings scheduled for Monday and of course Tues/Wed of next week, but we have to release the PDP Program Plan for January tomorrow. We need one replacement commodity for nectarines in California. It looks like our top two contenders are milk and then sweet potatoes. Do you think you can let me know by tomorrow morning?

Thanks,
Diana

Hi David,

So a two year budget was signed – hooray! It looks like we will be able to add eggs in the spring as we had hoped. For the new January commodity (from the list below), what do you think of adding milk? I think it is a very important commodity, last tested in 2011, and CA can analyze milk without a problem. Of course, if you think the other commodities, or one not listed here are more important, that is your call.

Thanks,
Diana

Hi David,

FYI, I will be out of the office for two weeks for training (until the end of October) and Chris will be Acting Director in my absence. I'll be checking email periodically, but please keep Chris in the loop on anything requiring PDP's attention.

We need to announce one replacement commodity for nectarines (to begin January 2016) on *November 15th*. So, ignoring the white elephant in the room, here are some potential replacements – the commodity will go to the California lab:

Milk – last tested in 2011

Sweet potatoes – last tested in 2010

Mangoes – last tested in 2010

Hot peppers – last tested in 2011

Cabbage – last tested in 2011

Onions – last tested in 2012

Canned pineapple? Fresh done over 10 years ago.

We need to add eggs but will need additional funding to do so in NSL.

Same for grains – we need corn and wheat data but would need additional funds to partner with GIPSA.

Thanks,

Diana

Hi David,

That's great news. We'd like to have this done well ahead of the April 2016 PDP Fed/State Meeting if possible so that we can talk about it at the meeting – especially in light of any adjustments that might be able to be made. So, by February or so if this is do-able.

Contacts from NASS will be Tim Keller and Franklin Duan. They will be tackling comparisons like the import vs. domestic, etc. that we discussed to estimate sampling error. Also, for MPD, Chris and I will serve as POCs.

Many thanks and wishing you a very Happy Thanksgiving!

Best regards,
Diana

This is a one pager with most of the information coming from your website. Could you give it a read for facts and readability. I have not been able to focus on it like I would like to. I am going to RD now to see who I can recommend for your contact interested in registering a pesticide.

David

Hi David,  
FYI. Please see below a violation:  
PDP Sample ID: NC1407090509WMWA1B  
Country: USA  
Commodity: watermelon  
Pesticide Detected: Acephate @ 0.084ppm; LOD 0.03 ppm; EPA tolerance 0.02 ppm.

Let me know if you have questions. Thanks

Hi David,

Washington State has submitted an article on salmon analysis using method validation data, with PDP's permission, to the Journal of Ag and Food Chem. In the opening, they describe the program:

Accurate pesticide dietary risk assessments by the US Environmental Protection Agency (USEPA) require incidence and level pesticide residue data. The Pesticide Data Program (PDP)

is a voluntary, Federal-State pesticide residue monitoring program administered by the U.S. Department of Agriculture (USDA) Agricultural Marketing Service since 1991. The purpose of

PDP is to collect and report pesticide residue data on commodities selected from the US food supply. Commodities included in PDP surveys are selected based upon consumption rates compiled from the **Continuing Survey of Food Intakes by Individuals**, with an emphasis on foods

most consumed by children and infants. PDP food sampling is based on rigorous statistical design that ensures the data are reliable for use in dietary exposure assessments. Pesticides included in the PDP survey are prioritized based on input from data users, stakeholders (USEPA,

USFDA, private grower groups, etc...) and current US tolerances and action levels, but data is collected for any additional pesticides tested by the participating laboratory.

Should we update the highlighted portion to include WWEIA? Or other reference (NHANES)?

Thanks,  
Diana
